

# BlueTraker<sup>®</sup> family of products: A Truly global coverage only with Iridium constellation

Type: Deployment Questions  
Date: June 2008

**Iridium constellation is the only one offering a truly 100% global coverage for tracking and monitoring from Pole to Pole**, while Inmarsat and other Satcom's covers only a part of the land and the oceans – mostly up to 70° Latitude.

Iridium Coverage Map

Inmarsat Coverage Map

Due to the Low-Earth Orbiting satellites Iridium has the shortest latency of communication (few seconds) that enables antenna to transmit less hazardous radio frequencies around it. BlueTraker<sup>®</sup> range of products are using Iridium satellite network for data transmission and bidirectional communication. This feature is just one among many that makes BlueTraker<sup>®</sup> transponders world leading tracking devices and one of a kind.
