### ***EMA PROVIDES GLOBAL TRACKING TO THE YOUNGEST SAILOR DESTINED TO CIRCLE THE GLOBE***

Slovenia – 28.07.2010 – Laura Dekker, a 14 year old professional sailor from the Netherlands has decided to undertake a challenging journey around the Globe with her 38 feet Jeanneau sailing boat. One of the key safety concerns was how to assure that the instant position of her vessel is known to the relevant people as well as the possibility to press a button and let her support team know that she is in a distress situation and where to search for her... The team found a definite answer to these issues in the **BlueTraker®2100, a satellite communications terminal developed and manufactured by EMA.**

**The BlueTraker®2100** is a satellite tracking and monitoring device especially designed for the remote monitoring of motor&sail boats at high seas, using Iridium satellite communication for data transfer. EMA is aware of how crucial the safety under sails is and is supporting Laura with BlueTraker®2100 on her voyage across oceans and back home...

#### **ABOUT EMA Group**

EMA Group ([www.bluetraker.com](http://www.bluetraker.com)) consists of three companies based in Central Europe and operating through a worldwide network of distributors. During the last 19 years, EMA has become the leading marine telematics and machine-to-machine (M2M) equipment manufacturer in Europe and wider.

This expansion led to a new range of solutions for intelligent transport systems and innovative maritime systems by introducing hybrid communication design for charter fleet tracking and fisheries vessel monitoring systems (VMS). The BlueTraker® range of products and systems offers global tracking, monitoring and surveillance of vessels of all sorts at low investment and for a modest air-time cost.
